Introduction

What can you use YooZ for?

- YooZ keeps track of all applications launched on your Macintosh, providing the date and duration of each session.
- YooZ keeps track of user login.
- YooZ is completely automatic
- YooZ provides many kinds of lists, like chronological history, total by program, usage graphics by day, month or year, summary of activity for a given period, user log and some information about the Macintosh.
- YooZ can access another networked Macintosh data via file sharing.
- YooZ helps you assess what your Macintosh is being used for.
- You can know how many time your children spend with the computer, and what they are exactly doing
- It helps you organize your network by distributing the right sized Macintosh according to each user's principal needs.
- YooZ will reveal whether you spend more time on your favorite games than on your word processor.
- YooZ is available both in **English** and **French** versions
- **Tiger** or later is required.
- YooZ is **Universal Binary**
- You can directly send an email to the author: yooz4mac@free.fr

What's new?

1.26 version (August 2007)

Enhancements

- New license price 10 € (50% rebate)
- New look of all windows

Shareware

Payment/Registration

<p>Online payment</p>	<ul style="list-style-type: none"> ● The big advantage for you (and me) is that you can pay shareware fees with your credit card (VISA, MasterCard and American Express) via email or online via Internet ● This also makes it easier for people in other countries, since the currency conversions are handled automatically. ● If you are paranoid and concerned that this might be a clever forgery, feel free to mail me. ● To register online with Kagi or PayPal , click here
<p>Direct registration</p>	<ul style="list-style-type: none"> ● Send me directly 10€ (in check or cash), or the equivalent amount of money in any other currency (only in cash, enclosed in a sheet of plain paper): <p>M. Pascal CARDON 17 cours du Buisson 77186 NOISIEL - FRANCE - email pcardon@kagi.com</p> <ul style="list-style-type: none"> ● Site license : 25 Euros ● World wide license : 50 € ● PLEASE, use Kagi or PayPal if paying with checks other than Euros ● Please, add the following with your payment: <ul style="list-style-type: none"> • Your YooZ license name, YooZ license serial number (About menu) • Your e-mail address, if you have one

Why should you register?

- To get free support and bug fixes.
- To access the next versions for free
- Because your suggestions may have a chance to be included in future versions.
- To obtain your private code which avoids the about window to be displayed each time you launch YooZ

Distribution

- You may distribute YooZ as long as:
 - All files, including the shareware notice, are included.
 - No charge is made without my WRITTEN consent.
 - Distribution is allowed on internet servers, BBS, CD ROMs and computer magazines in the respect of the above conditions ...

YooZ Installation

Prerequisites

- **Tiger (10.4)** is required.
- Macintosh computer, with PowerPC or Intel processor.
- [68k Mac users can download a 68k version by clicking here](#)
- A color display is recommended.
- A printer is recommended.

YooZ Components

- **YooZ:** This is the main part of the package. It's installed in "Utilities/YooZ" folder, but you can put this program where you want on your disk.

- **YooZDaemonPgm:** This program records the name of all programs you use. This program must be in the "/Library/ApplicationSupport/YooZ" folder.

- **Joblog:** This is the history file created by "YooZDaemonPgm". This file must be in the "/Library/ApplicationSupport/YooZ" folder.

- **YooZ Installer:** YooZ installation program.

- **YooZ Uninstaller:** YooZ uninstaller program

Installing YooZ

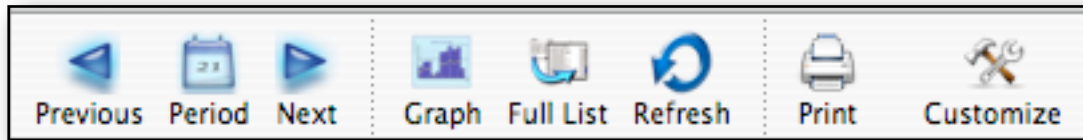

- To install YooZ, run YooZ Installer

Starting YooZ

- Run YooZ and choose Preferences menu
- The first time, YooZ may ask for the Joblog file. It should be present in the "/Library/ApplicationSupport/YooZ" folder.

User's Interface

This chapter describes the common buttons, dialogs and functions used throughout the whole program

The toolbar and the buttons

Previous Period button

- Clicking this button displays the previous period of same kind (day, month year or entire file). Typing '-' key has the same effect.

Period Choice button

- Clicking this button displays the "Period choice" window shown below.

Next Period button

- Clicking this button displays the next period of same kind (day, month year or entire file). Typing '+' key has the same effect.

Graph button

- Clicking this button displays the graph related to the selected line and the corresponding period.

Full List button

- This button will show again the history or graph full list for the selected period.

Refresh button

- Click this button to refresh the displayed lists.

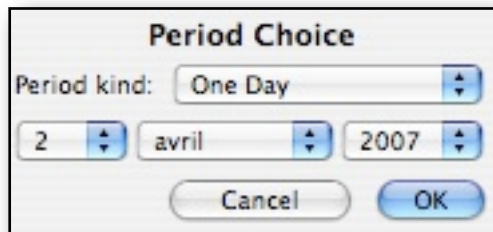

Print button

- Clicking this button prints the selected window. The print menu, or typing  P has the same effect.

Customize button

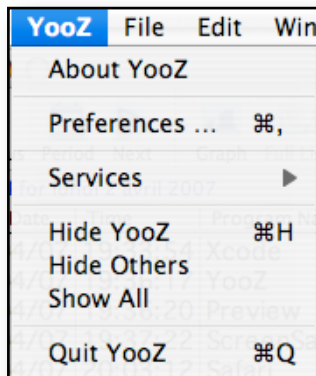

- This button is to configure the toolbar. You can also "CTRL" click the toolbar to customize it.

Period Choice button

- You can choose the whole file, a one year, a one month or a one day period.
- Depending on the period kind, some days, months or years should not be selectable if no corresponding data is registered in the "Joblog" file.
- To cancel your choice click "Cancel".
- To display the chosen period, click "OK" or depress "Enter" key

YooZ menu

About YooZ menu

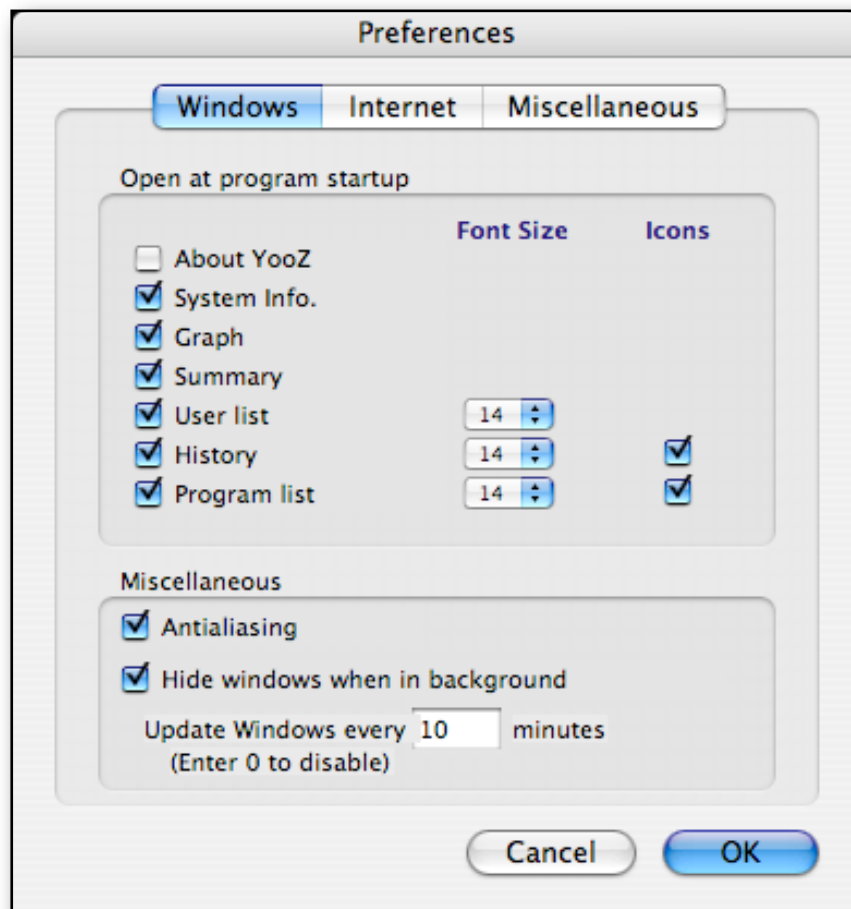

- The About YooZ menu, shows information about the author, and on YooZ Shareware status.
- The upper rectangle gives info about shareware status
- Registering the Shareware
 - Clic "**Register**", then type your license name as specified in the registration mail you received
 - Then type your private key.
- Clicking email link will automatically launch your email program
- Clicking YooZ web site link will automatically launch your browser program and connect you on YooZ web site

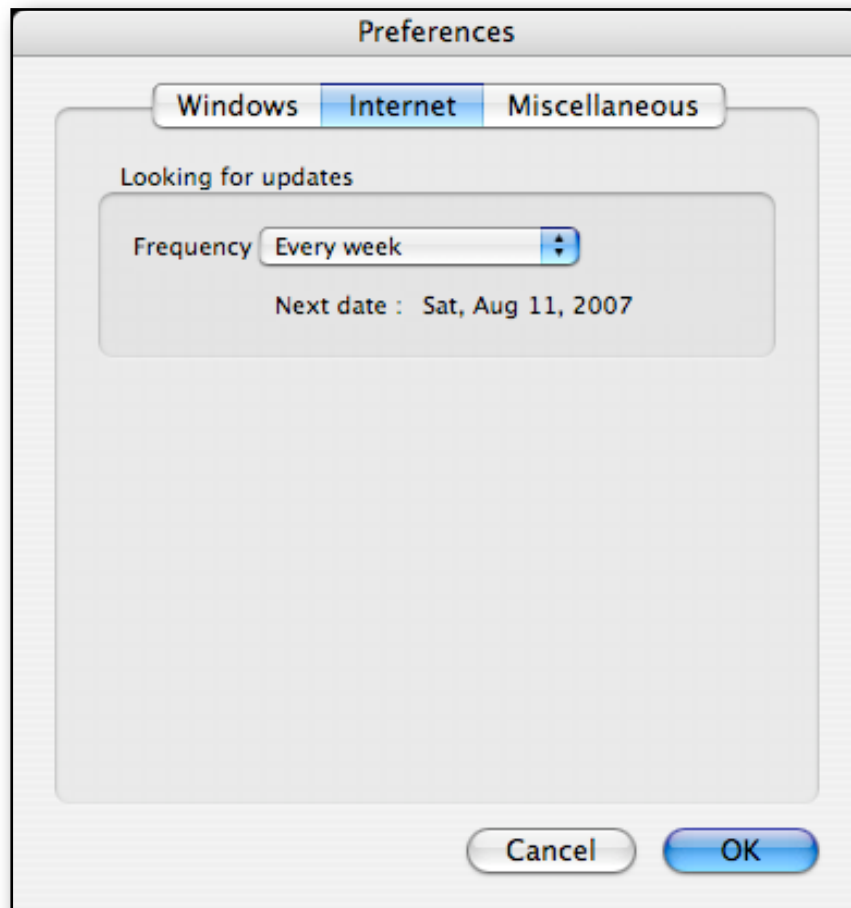

Preferences

There are 3 tabs: Windows, Internet and Miscellaneous

- The "**Windows**" tab customizes YooZ and has 2 parts:
 - The first part is to choose the displayed windows at YooZ startup, to set the font size used in the list, and to display the programs icons.
 - The second part is to set text antialiasing, to hide YooZ when it is in the background, and to enable/disable automatic refresh of the windows.

- The "**Internet**" tab allows to automatically look for a new version of YooZ over Internet.
- There are 4 options: Manualy (no automatic check), every month, every week, everyday or at each startup.

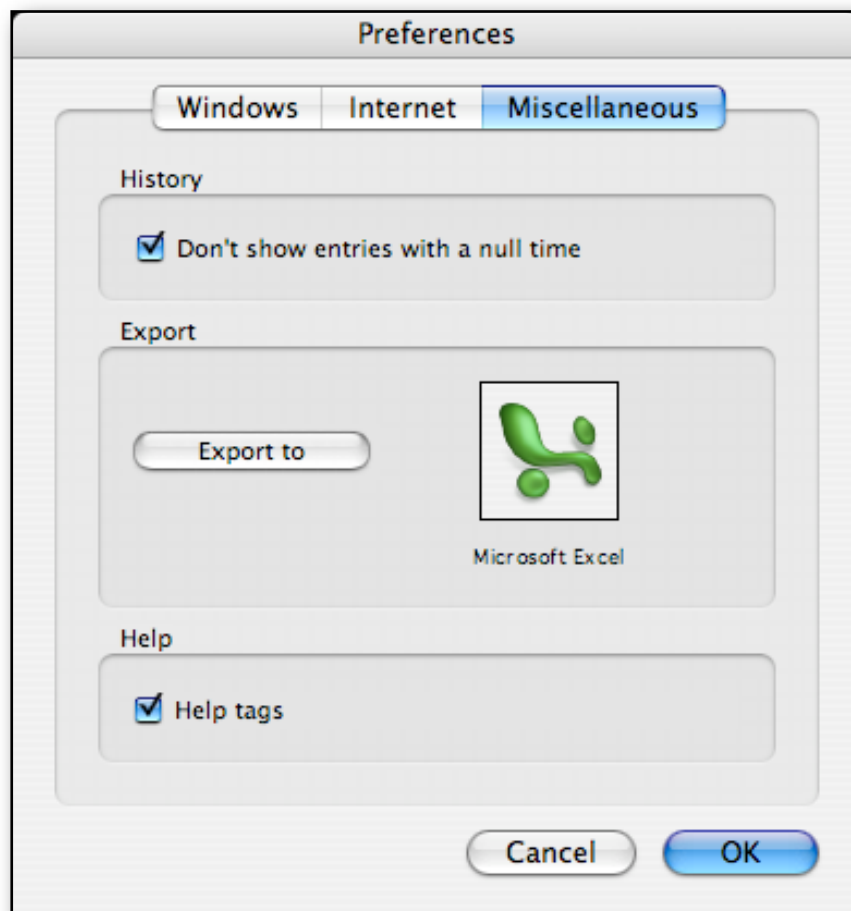

- The "**Miscellaneous**" shows 2 areas:

- **History**

The "Don't show entries with null time" option prevent YooZ to show the program with a null time. By the way these programs are regsitred in the "Joblog" file..

- **Export**

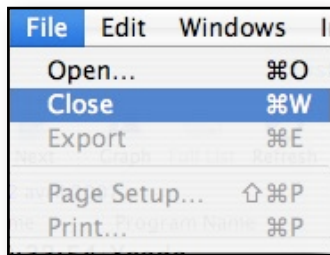

The "Export to ...", button will allow you to choose a program to read the data exported by YooZ. These files are "tab tab return" files

Quit YooZ

- This menu quits YooZ.

The File menu

Open

- This menu reads another "Joblog" file, for example one from a networked Macintosh.
- Usually "Joblog" file is in the "/Library/Application Support/YooZ" folder.
- A progress window is displayed while YooZ is "compiling" the Joblog file.

Close

- This menu closes the frontmost window.

Export

- This menu is available if the History or the Programs window is frontmost.
- The exported YooZ data can be used in another program like a Word Processor or a Spreadsheet.
- The file format is text, with "Tab Tab Return" separators.
- The destination program is chosen via the Preferences menu.

Page Setup

- This menu is to setup printing options for the frontmost window.
- You can define a different print setting for each window.

Print

- This menu prints the frontmost window.
- This menu works with the History, Programs list, User list, System Info, Summary and Graph windows.

The Edit menu

Edit	Windows	Inter
Undo		⌘Z
Cut		⌘X
Copy		⌘C
Paste		⌘V
Delete		
Show Clipboard		

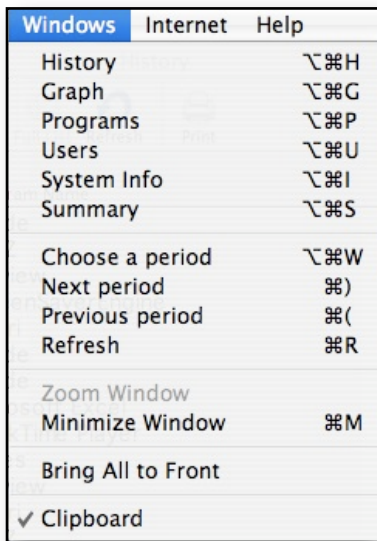

Copy

- This menu is available with the graph window, and with History or Program List windows when a line is selected in the list.

Show Clipboard

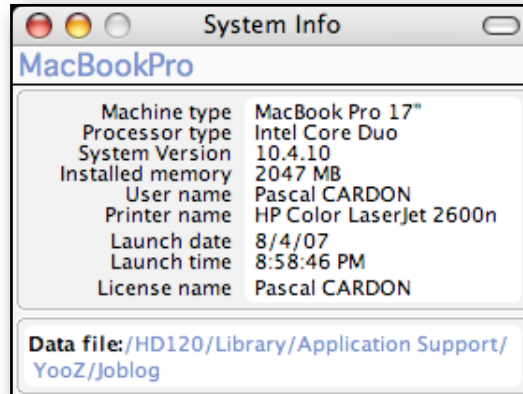

- This menu shows the Clipboard content.

The Windows menu

System Info

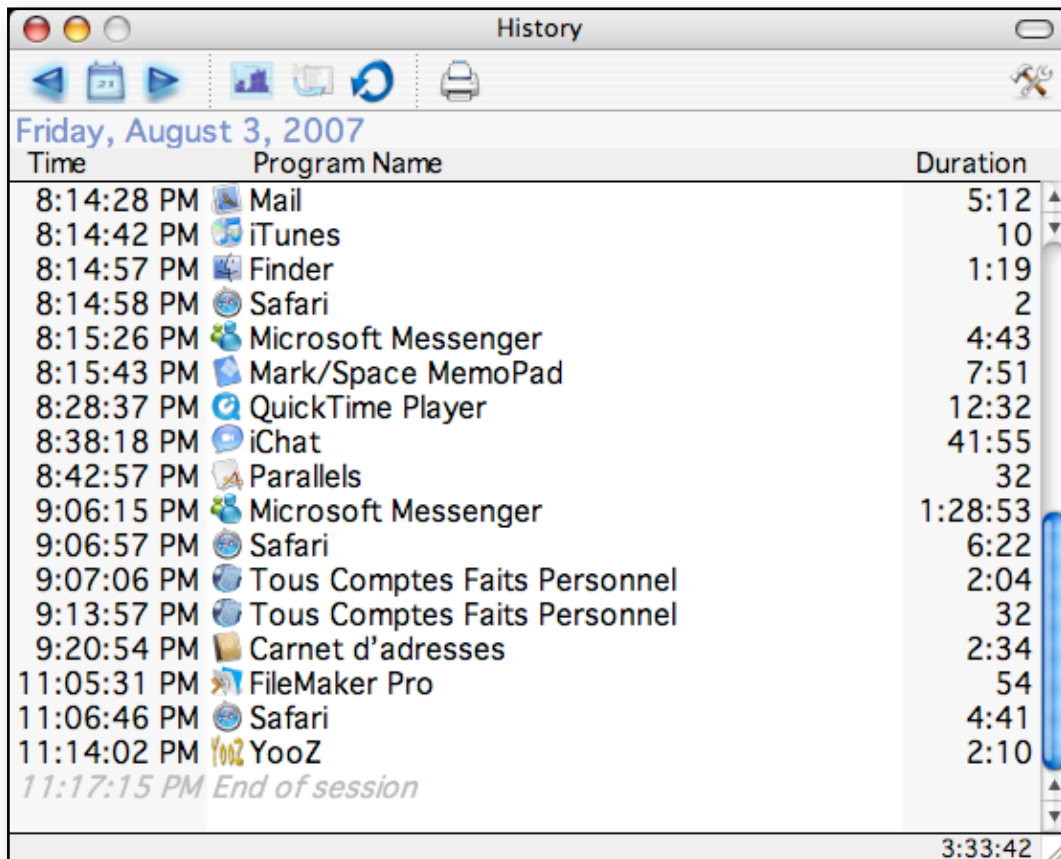

- System Info shows details about the machine from which you opened the "Joblog" file.

- This is usually the local machine, but you can open a remote "Joblog" file via the file sharing or any "Joblog" file you get from another Mac

History

- The History displays the chronological usage of the machine.

Time	Program Name	Duration
8:14:28 PM	Mail	5:12
8:14:42 PM	iTunes	10
8:14:57 PM	Finder	1:19
8:14:58 PM	Safari	2
8:15:26 PM	Microsoft Messenger	4:43

11:14:02 PM	YooZ YooZ	2:10
11:17:15 PM End of session		
		3:33:42

Launch date and time, program name, session duration are displayed for each session.

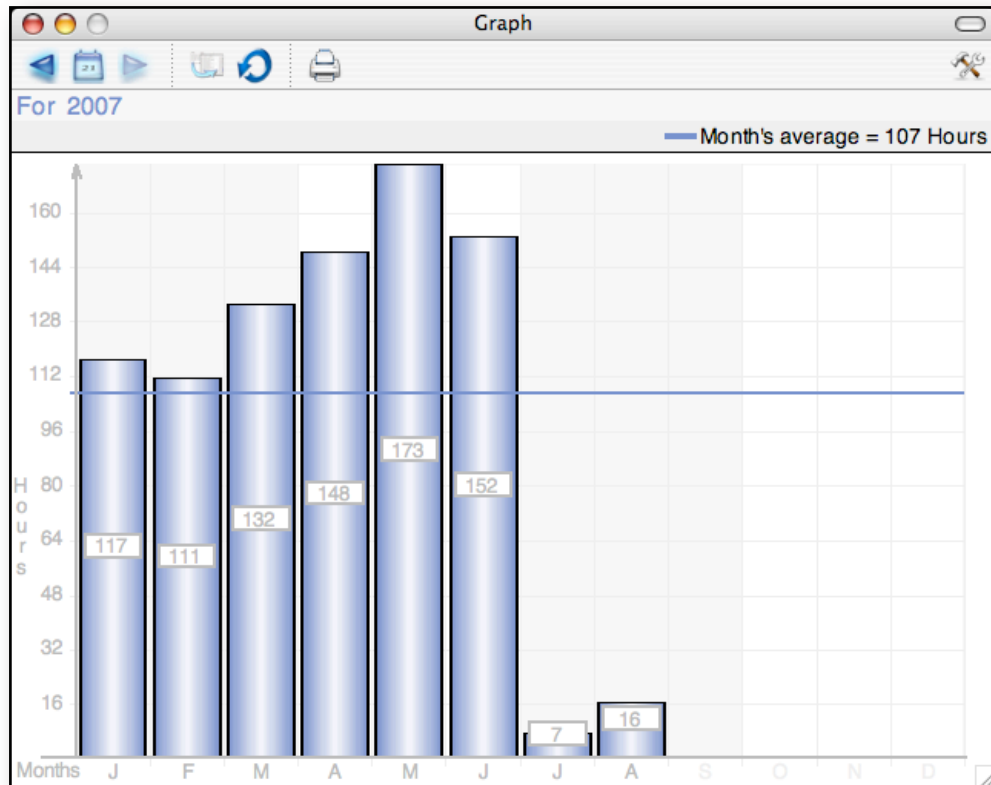

- The bottom of the list displays the total time for the selected period.
- If a line is selected in the list, it can be copied in the Clipboard by using the "Copy" menu or the corresponding shortcut.

TIPS:

- Double clicking a program name, displays the records of this program for the selected period.
- In this case, the bottom of the list displays the total time for the selected program.
- The "Full List" button will show again the whole history for the selected period.

Graph

- This window displays a graph for the selected period.

- The horizontal line shows the average time for the selected period.
- You may copy the graph in the clipboard (using Copy option in Edit menu).

Programs

- This window displays the total used time by program for the selected period.
 - To sort by name, click the "Program Name" list header.
 - To sort by duration, click the "Duration" list header.
 - To move the selection up or down, use the "Up Arrow" or "Down arrow" keys.

2	10	iTunes
1	1	Programme d'installation

3:33:42

TIPS:

- To select a program (i.e. to copy the corresponding line in the clipboard), type the first letter of its name.
- If a line is selected in the list, you may copy it in the Clipboard by using "Copy" in the Edit menu.
- Double clicking a program name, or typing "enter" on a selected one will display the detailed history for this program and the selected period

Summary

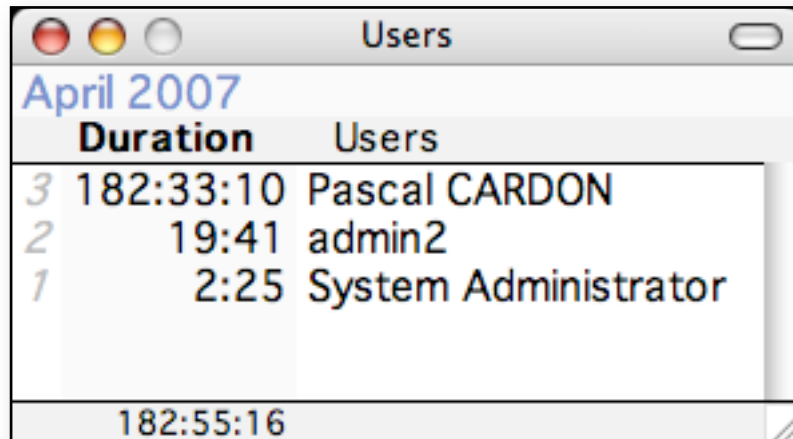

- This menu displays summarized data for the selected period.

- One session is the period of time from the start of a program to its termination.

Users

- This window displays the total used time by user for the selected period.

April 2007		
	Duration	Users
3	182:33:10	Pascal CARDON
2	19:41	admin2
1	2:25	System Administrator
182:55:16		

- To sort by name, click the "Users" list header.
- To sort by duration, click the "Duration" list header.
- To move the selection up or down, use the "Up Arrow" or "Down arrow" keys.

TIPS:

- To select a user (i.e. to copy the corresponding line in the clipboard), type the first letter of its name.
- If a line is selected in the list, you may copy it in the Clipboard by using "Copy" in the Edit menu.
- Double clicking a user name, or typing "enter" on a selected one will display the detailed history for this user and the selected period

Period Choice

- This Menu displays the Period Choice dialog of the front most window

Next Period

- This menu displays the next period of the front most window
- You can get the same result by typing the "+" key

Previous Period

- This menu displays the previous period of the front most window
- You can get the same result by typing the "-" key

Refresh

- This menu updates the windows. In the windows which are displaying the actual period, you'll see an update of the durations

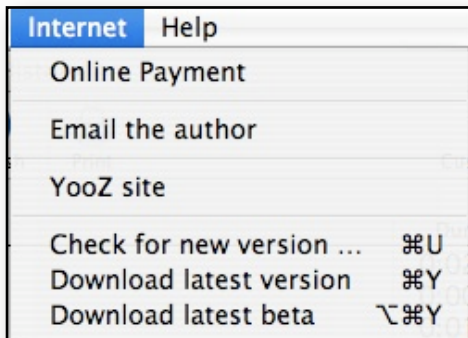

NOTE :

- An automatic update occurs when YooZ switches from background to foreground
- You can ask for a periodic update in the preferences

Clipboard

- This menu displays the clipboard.

The Internet menu

Online Payment

- This menu launches your Internet browser and displays the page that allows to choose the [Kagi or PayPal secured online payment](#).

Email the author

- This menu launches your mail program, to send a [mail to YooZ author](#).

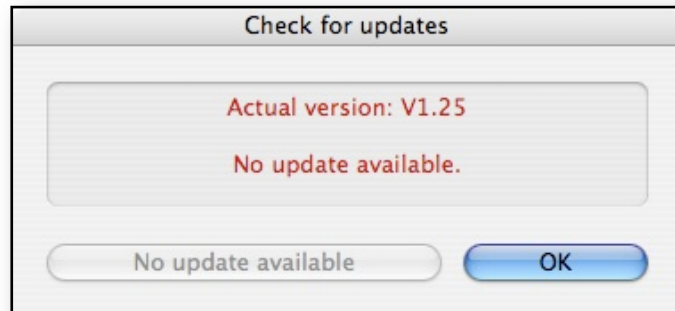

YooZ site

- This menu launches your Internet browser and displays YooZ page:
<http://mcardon.free.fr/YooZ>

Check for new version

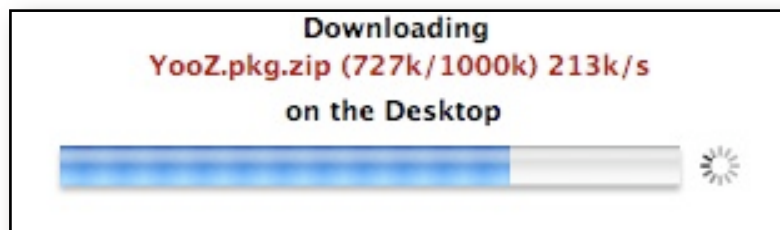

- This menu look for a new version over Internet and displays the result in a window.
- If you use a final version (ie. 1.2), YooZ search for a more recent final version (ie. 1.25) and displays a **download** button if a new version is available, if not, it looks for an available beta version.
- If you use a beta version (ie. 1.25rc1), YooZ search for a more recent final version (ie. 1.25). If none is available, YooZ search for a more recent beta version (ie. 1.25rc2). If a

new version is available, a **download** button is displayed.

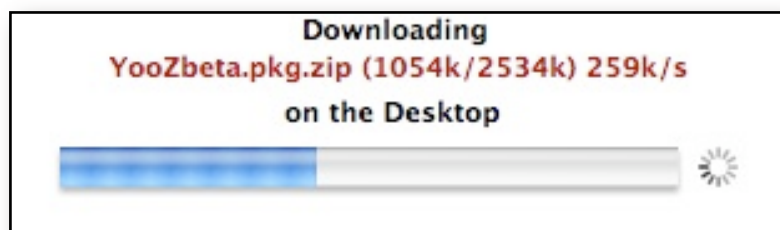

Download latest version

- This menu download the latest [final version](#) over Internet, whatever your actual version. The downloaded file is copied on the Desktop.

Download latest beta

- This menu download the latest [beta version](#) over Internet, whatever your actual version. The downloaded file is copied on the Desktop.

Tips and technics

- Changing the license name:
 - Click the **Register** button in the “About YooZ” menu.
Note : you must have the license key corresponding to the new name
- Choosing a new Joblog file at startup:
 - Press and hold the “shift” key during YooZ startup. The same result can be obtained with the “Open” menu.
- Rebuilding the joblog file:
 - Press and hold the "CTRL" key at YooZ startup.
- See the sessions of a given user:
 - From the user’s list, choose a period, then double clic a user’s name to see the corresponding history
- See the graph of a given user:
 - From the user’s list, choose a period, then select a user’s name, then clic the **Graph** button.
- See the graph of a given program:
 - In the History window, choose a period, then double-click a program, then click the **Graph** button
 - From the Program list, choose a period, select a program, then click the **Graph** button
- See the history of a given program:
 - In the History window, choose a period, double-click a program
 - From the Prrogram list window, choose a period, then double-click a program
- You have enabled the parental control on your Mac, and the activity of some users is not registred by YooZ:
 - You must add YoozDaemonPgm, in the list of authorized programs, for these users.
YoozDaemonPgm is in the folder “/Library/Application Support/YooZ”

Versions history

● 1.25 version (May 2007)

- PayPal payment is now accepted
- YooZ is Universal Binary
- New look and preferences: customizable toolbars in every windows, display program icons, choose font size, text antialiasing
- Check for new versions over Internet
- Dock menu
- Help tags
- YooZ daemon has been completely redesigned to enhance the precision of time recording
- Uninstaller is part of YooZ package
- New User's manual
- Simplified registration process
- Many code and resources optimizations
- Non registred shareware is fully functionnal. Only a 5s "About YooZ" display at launch

● 1.2 version (August 2006, 6th)

News

- YooZ is now Universal Binary
- Graphic window greatly enhanced
- Online help added
- Registration process has been simplified and a Register file is created when registering
- Windows are periodically refreshed to show new entries and updated counters
- New about window which displays the program version

Bugs correcions

- About window was randomly displayed for non registred users
- Greatly enhanced immunity to corrupted dates (you can get corrupted dates when your Mac looses its date and time for exemple)
- Minor bug corrections

Known problems

- No support for double byte character set

Todo list

- A menu to open remote logs
- An open recent menu
- A list of excluded programs
- The possibility to assign a family name to each program
- The possibility to assign a generic name to many variants of the same program
- The possibility to remove entries from the history
- Drag and Drop to other programs
